UVFIX – POWERFUL AND LONG-LASTING

Our pump family has increased! **UVFIX** bellows pumps is especially suitable for abrasive material like lacquer with high solid fraction or UV-lacquer systems. The piston made of high performance ceramic increases the wear resistance and simultaneously drops maintenance effort. Due to its simple and clever construction service works can be done quickly and uncomplicated. Assembled to a trolley our little „muscle man“ can be employed everywhere at any time.

- ✓ ***compact!***
- ✓ ***reliable!***
- ✓ ***powerful!***

A high conveying volume guarantees optimum paint supply at any time and provides a constant spray image of high quality.

Even highly viscous material are no problem for our pump. Its ratio is enough for all applications with low pressure.

UVFIX Bellows Pump

Wear resistant pump with high performance ceramic piston

Especially for UV-lacquer as well as abrasive material like paint systems with high solid part.

Technical Data:

Pump with corrosion resistant design / stainless steel. Performance data:
Theoretical values

Ratio : 8:1

Max. material overpressure 48 bar (with 6 bar ingoing pressure)

Delivery volume max. 12l/min

Air consumption approx. 120 l/min. with max. delivery volume
and (air) = 1 bar

Material connection (suction): M 26x1,5

Material connection (pressure): M 16 / 3/8" / M 18x1,5 / 1/2" (upon request)
